Introduction

The Safetrace Dashboard is a web-based system that supports the monitoring, management, and analysis of integrated farmer and plantation data. The system provides comprehensive data visualization, making it easier for program managers, field teams, and other stakeholders to track field activities more effectively and efficiently.

This guide is designed to help users understand the dashboard's core functions and how to use them correctly.

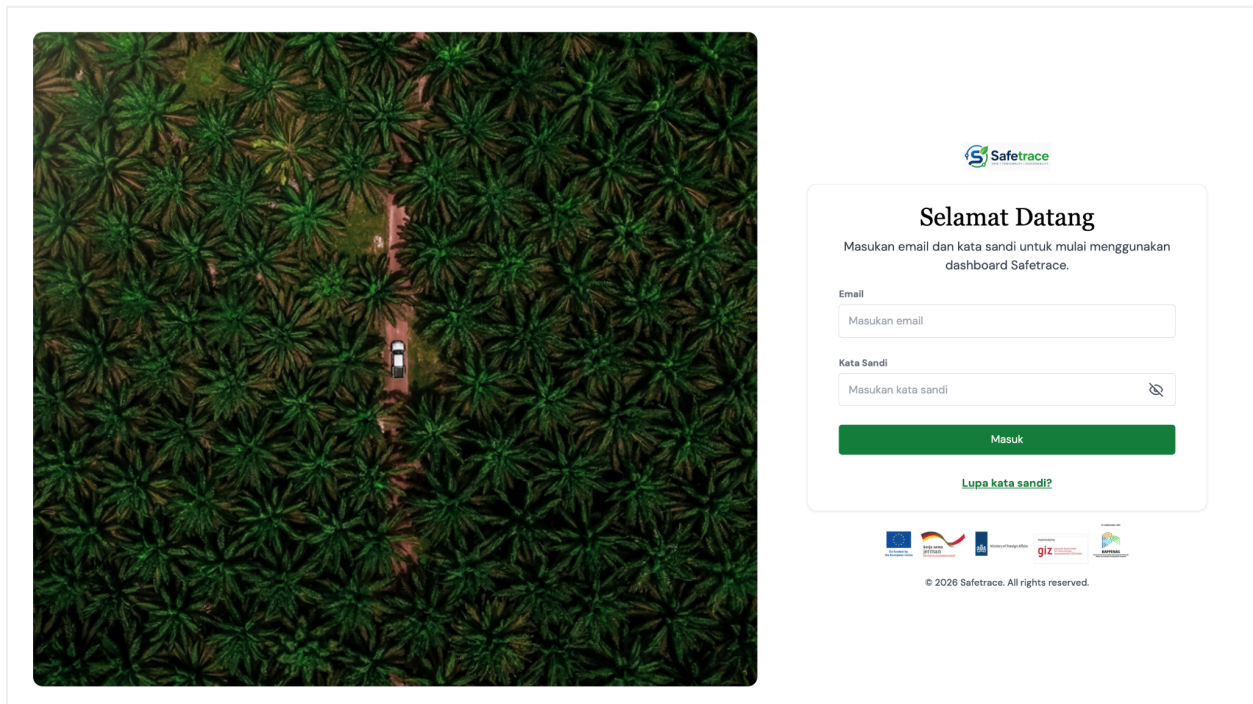

This system was produced with the financial support of the European Union, the German Federal Ministry for Economic Cooperation and Development (BMZ) and the Ministry of Foreign Affairs of the Netherlands, as part of the SAFE Project, implemented by GIZ. Its contents are the sole responsibility of PT VBL and do not necessarily reflect the views of GIZ, the European Union, the German Federal Ministry for Economic Cooperation and Development (BMZ) and the Ministry of Foreign Affairs of the Netherlands

No.	Main Feature	Description
1	Peta	Through the map view, users can see the spatial distribution of plantation areas, identify specific locations, and monitor field conditions by location in a clear, visual way.
2	Petani	The traceability dashboard displays a structured summary of farmer profiles and plantation information, including the number of farmers, land area, commodity types, and other relevant statistics

Before using the Safetrace Dashboard, make sure your device meets the following requirements:

- A web browser
- An internet connection
- A registered user account
